
Tool and method for riser nut, supply nut, removal, or installation

Abstract

A tool is provided for installing faucet supply tube nut on a faucet assembly nipple at the underside of a lavatory. The tool allows installation of the faucet water supply tube nut to be performed manually by hand. The tool once seated on the faucet supply tube nut is turned by hand 360 degrees until the faucet supply tube is tightened. The tool can then be slid down the supply tube to the angular water supply shut off valve and the riser nut at the bottom end of the supply tube can be connected or disconnected also depending on the tool users need. Allowing work to be accomplished in a matter of seconds verses minutes.
